

# Tuesday Talk

The 2015 Municipal Water Project continued into late November last year with 559 homes connecting to water. With this late in the season completion, the City of Mequon Water Utility and its contractor are aware that there are areas that still need restoration or repairs.

The contractor is scheduled to return in early May (weather dependent). They tentatively plan to work from West to East in the Village, starting in the Orchard Highlands subdivision. They will be addressing the following concerns in project areas:

- Soil compaction,
- Planting of grass,
- Settling near curbstones,
- Asphalt patches in the roadway,
- Ditching, and
- Shouldering

To stay updated on the progress of restoration, follow the [Water Blog](#) on the Village website. The Blog will also include a survey where you can note specific concerns with regard to the Project's restoration work.
