Winter(?) Weather

The weather lately has been unpredictable to say the least, which has led to hazardous driving conditions.

Roads and freeways that look wet may actually be ice-covered. As a safety precaution, reduce speeds and allow extra following and braking distance from other vehicles as well as stop lights and signs.

Click here for winter driving tips from the National Highway Transportation Safety Administration and Occupational Safety and Health Administration.

Mumps on the Rise

There was an increase in mumps cases in 2016. Mumps is an acute viral illness and is spread through the air or by direct contact with saliva or infected droplets. Symptoms usually appear 12 - 25 days after exposure and cause inflamed, swollen and tender salivary glands. Other symptoms may include fever, fatigue, weakness, cough, or pain with chewing or swallowing. Some mumps' patients may even be asymptomatic.

Vaccination is the best way to protect against mumps . This vaccine is a combination of measles-mumps-rubella (MMR). To see if you are up to date on your MMR vaccine, visit the Wisconsin Immunization Registry. If you believe you are experiencing symptoms of mumps, notify your physician to get tested. To learn more about mumps, visit the CDC website.

Stormwater and Drainage Management

Due to the unseasonably warm temperatures, snow has been melting and frost has been rising from the ground. As a result, there has been water accumulating throughout the Village.

Crews have been unclogging and removing debris from drainage ditches. If you have a clogged drainage ditch, please contact Jake Meshke, Director of Community and Utility Services, at (414) 351-8812.

Save the Date

Mark your calendar for these important dates!

April 29
9am - 12pm - Village Clean-Up Day

July 4
9am - Fourth of July Parade

August 10
6:30pm - Bayside Night at the Chinooks
